DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, 5-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamiti et al PG-PUB 2004/0047437 A1 in view of Honeisen PG-PUB 2003/0115332.

Re Claims 1, 12, 17, 21, 26, 27, 28, Hamiti teaches in fig. 1, a UE caller (first end-user) establishing a SIP session (a signaling plane...SIP) to the UE Callee (a second end-user); further teaches that the communication system supports RTCP to monitor QoS and gives information about the end-users of the session [0088]; fig. 9 teaches the header that include the QoS information [0080] to be shared by the network. Hamiti fails to explicitly teach that the QoS information is transmitted within the header of the SIP message. However, Honeisen teaches header field of the SIP message are used to indicate QoS limitations [0115]. One skilled in the art would have been motivated by Honeisen to modify the header of Hamiti to include QoS information of the SIP header to support different operational mode of the UE codec. Therefore, it would have been obvious to one ordinary skilled to combine the references

Re Claims 2, 5-9, refer to Claim 1, wherein fig. 9 includes plurality of parameters (signaling parameter & media transmission quality parameter).

Re Claims 10, 11, See UE device.

Re Claims 13, 22, refer to Claim 13, wherein the network includes a Server.

Re Claims 14, 15, 18, 19, 23, 25, , refer to Claim 13, wherein SIP message is a set-up message.

Re Claims 16, 20, 25 refer to Claim 13, wherein the UE includes a display to display and GUI function for messages (QoS parameter).

Allowable Subject Matter

3. Claim 29 is allowed.

4. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

In combination with Claims 1-3, prior art fails to teach the claimed signaling parameter.

Response to Arguments

5. Applicant's arguments with respect to claims 1, 2, 5-28 have been considered but are moot in view of the new ground(s) of rejection.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew Lee whose telephone number is 571-272-3130. The examiner can normally be reached on Monday to Friday from 8:30AM to 6:00PM.
